

XVT 10.1 Release Notes

Features:

- Added a CImageButton class.
- Added context menus to the CWindow class.
- Added support for PNG images.

Changes:

- Changed the return type on `xvt_fsys_get_file_attr` from long to XVT_INTP.
- Removed the requirement to set a shell path in Architect.
- Switched from InstallAnywhere to NSIS on Windows and STGZ on Linux/Mac/UNIX.
- Packaged debug databases with Windows libraries.
- Updated the icons in Architect and Design.
- Renamed `curl` to `xrc` and `.url` files to `.xrc`.
- Increased size of buffer for printer drivers.
- Updated look & feel of Register application.

Bugfixes:

- Fixed an issue where filesystem functions returned an incompatible pointer type on 64-bit systems.
- Fixed mousewheel scrolling in a CScroller.
- Fixed an issue where an application would crash when an empty CTdiController was deleted.
- Fixed the creation of floating licenses with the Register application.
